

**Bulletin CQB 03-11**

**Subject:** 2001-2003 Two front rotor possibilities

**Vehicle Involved:** 2001-2003 Chrysler Mini Vans

**Condition:** Two front rotor possibilities exist that meet or exceed original equipment requirements. The basic dimensions of these two part numbers are exactly the same, however they are not interchangeable. Rotor number 53002 fits all models equipped with rear drum brakes. Rotor number 53002 is an outboard-vented rotor. This means air is drawn inward from the outboard side of the rotor.

Rotor number 53004 is an inboard-vented rotor, which means air is drawn inward from the inboard side of the rotor. Rotor number 53004 is used on vehicles equipped with four-wheel disc brakes. These are two completely different rotor designs. One design should never be substituted for the other. Note the cross section illustrations below.
