

## THE PROBLEM: WORN INNER TIE ROD END

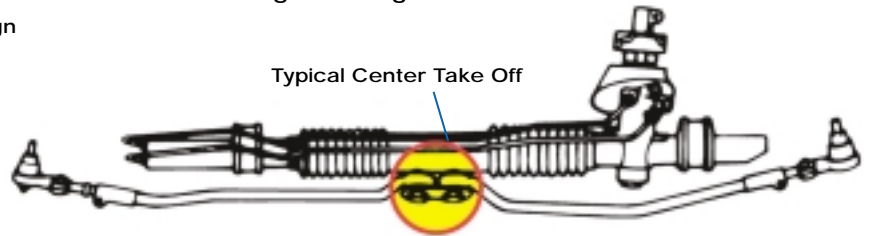

O.E. Bushing Design

- Original equipment design is a one-piece bushing which requires special tools and lubrication to install.
- Even with the special tool, installation is very difficult and often the new bushing is damaged.

Typical Center Take Off

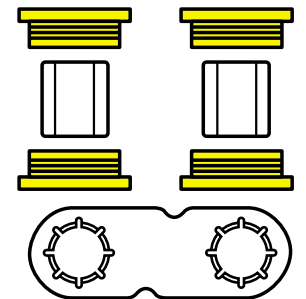

## THE PROBLEM SOLVER: CARQUEST® INNER TIE ROD END REPAIR KIT

- Two-piece bushing included in the CARQUEST repair kit eliminates special tools and lubrication required to install the O.E. one-piece design.
- These bushings snap into place with little effort, saving installation time.
- Bushing kit also includes a bolt lock plate.
