

TECHNICAL SERVICE BULLETIN NO. 2509

YUGO CLUTCH

Both the 1100cc and 1300cc engines can now use the standard 1100cc flywheel. It has a thickness of 28mm. (ARI P/N 48-3000)

The original 1300 flywheel, which measured 31mm thick, was fitted on most models produced between 1983 and 1987. Because of the difference in flywheel thickness it is important that the correct clutch assembly is used.

A vehicle with a 28mm flywheel uses clutch set 20-66003. ARI part number 20-66005 clutch set is used with the 31mm flywheel (ARI P/N 48-3001).
