

CARQUEST Filter Construction Means better Filters

CARQUEST Filter designed products provide superior fit, performance, and durability. **CARQUEST Filters'** Fully Integrated Base Plate Design features ❶ a full tuck, double rolled seam ensuring more strength and durability. Other **CARQUEST Filter** features include ❷ thicker metal base plates, permanent set seam sealant and flow enhancement plate. "Dome Up" ❸ plate design allows for easier installation while assuring distribution of the thread engagement throughout the entire plate and proper gasket compression while at the same time eliminating the possibility of thread failure due to metal thickness variation or brittleness.

CARQUEST Filter Competitor

This precisely engineered **CARQUEST Filter** component is specifically designed and manufactured with a *Kicked & Tucked* or *Closed Ground* feature to ensure a positive and precise element load is delivered while eliminating the potential for internal component damage due to abrupt or abrasive spring ends. By providing up to 100% more load than competitive filter designs, the **CARQUEST Filter** spring also ensures the internal components remain sealed and secured in place during both extreme circumstances, such as cold engine start up and other fluid flow and pressure surges, as well as during all routine system operations.

The **CARQUEST Filter** spiral centertube design provides as much as twice the strength of competitive filters, preventing tube collapse or media failure under extreme circumstances and normal operating conditions while at the same time maximizing fluid flow and filtration efficiency.
